

Suyyash Arora

Gwalior, Madhya Pradesh, India

suyyasha@gmail.com | +91-9174455550 | github.com/suyyash-aroraa

Summary

Python developer with about a year of freelance experience building and delivering full-stack web applications for paying clients using Flask, SQLAlchemy, and PostgreSQL, including payment gateway integration. Also independently built a decoupled Django REST Framework + React/TypeScript e-commerce platform, with a self-built payment gateway simulation, role-based auth, a custom admin dashboard, and an automated test suite. Comfortable owning a project end-to-end and picking up new frameworks quickly.

Technical Skills

Languages: Python, JavaScript, TypeScript, C, C++

Backend: Flask, Django, Django REST Framework, SQLAlchemy, REST API design, JWT auth

Frontend: React, Alpine.js, HTML5, CSS3, Tailwind CSS

Databases: PostgreSQL, SQLite, MySQL basics

Payments & Auth: Payment gateway architecture (webhooks, HMAC signing, idempotency), role-based access control

Tools & Deployment: Git, GitHub, Cloudflare, Postman, Linux, Docker basics, Pytest

Experience

Freelance Python Developer

Sept 2025 – Present

Self-Employed – Remote

- Delivered paid full-stack web development projects for independent clients, earning over 1,50,000 across engagements, using Flask, SQLAlchemy, and PostgreSQL.
- **Restaurant Point-of-Sale System (HestiaPOS):** Built and deployed a full POS product for a restaurant client – REST APIs, database design, an Alpine.js frontend, and online order payment gateway integration – and provided ongoing post-launch support and bug fixes. A simplified public version (without the client's payment integration) is on GitHub: github.com/Suyyash-aroraa/hestia-pos
- **CRM-ERP System (educational institution client):** Built a CRM/ERP web application to manage student, staff, and administrative workflows for an educational institution, using the same Flask/SQLAlchemy/PostgreSQL stack.

Projects

Django E-Commerce Platform

Django, DRF, React + TypeScript, PostgreSQL

- Built a decoupled e-commerce platform (DRF backend, React/TypeScript frontend) with a variant-based product catalog, faceted search, cart, and checkout.
- Designed a self-built payment gateway simulation shaped like a real PSP – HMAC-signed webhooks, idempotent event handling, and an order status state machine with audit trail – behind a provider interface so a real gateway is a drop-in adapter.
- Implemented JWT auth with role-based access and a custom admin dashboard (Recharts); covered with a pytest suite (webhook verification, idempotency, stock-race handling, permissions). Runs locally; public repo: github.com/Suyyash-aroraa/django-ecom

Inventory Management System

Flask, SQLAlchemy, PostgreSQL, Alpine.js

- Built a CRUD web app to track stock levels, incoming/outgoing inventory, and low-stock alerts, with a Flask backend and SQLAlchemy models over PostgreSQL.

Education

VIT Bhopal University

B.Tech, Computer Science and Engineering (Cloud Computing and Automation)
